# ABSTRACT

---

## SECURITY CLASSIFICATION: NATO RESTRICTED (NR) (NATO)

This document defines the NWP Radar Profile, an OGC API – Environmental Data Retrieval (EDR) Part 3 Service Profile. It specifies normative requirements and conformance tests for server implementations conforming to this profile.

# KEYWORDS

---

The following are keywords to be used by search engines and document catalogues.

NWP, earth observations, cube, radius, items, datetime, precipitation\_amount, radar

# PREFACE

---

This document was prepared by the submitting organizations.

## IV

### SECURITY CONSIDERATIONS

---

No security considerations have been made for this document.

## V

### SUBMITTERS

---

All questions regarding this document should be directed to the editor or the submitters:

## VI

### POINT OF CONTACT

---

This service is provided by Austrian Military (<https://www.bmlv.gv.at/english/forces/organisation.shtml>). Email: [presse@bmlvs.gv.at](mailto:presse@bmlvs.gv.at)  
Address: Ministry of Defence, Kommunikation, Rossauer Lände 1, A-1090, Vienna, Austria  
Hours: Monday to Friday 08:00 – 17:00  
Contact instructions: During hours of Service

1

# SCOPE

---

# 1

## SCOPE

---

This standard defines the NWP Radar Profile. It specifies requirements and conformance tests for implementations of this profile.

2

# CONFORMANCE

---

## 2

## CONFORMANCE

---

Conformance with this standard shall be checked using the Abstract Test Suite in Annex A.

The following conformance classes are defined:

- [http://www.opengis.net/spec/ogcapi-edr-3/1.0/conf/nwp\\_radar](http://www.opengis.net/spec/ogcapi-edr-3/1.0/conf/nwp_radar)

# NORMATIVE REFERENCES

---

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

Mark Burgoyne, David Blodgett, Charles Heazel, Chris Little, Open Geospatial Consortium: OGC 19-086r6, *OGC API – Environmental Data Retrieval Standard*. Open Geospatial Consortium (2023). <http://www.opengis.net/doc/IS/ogcapi-edr-1/1.1.0>.

OGC API – EDR Part 3: Service Profiles (draft)

# 4

# TERMS AND DEFINITIONS

---

No terms and definitions are listed in this document.

This document uses the terms defined in OGC Policy Directive 49, which is based on the ISO/IEC Directives, Part 2, Rules for the structure and drafting of International Standards. In particular, the word “shall” (not “must”) is the verb form used to indicate a requirement to be strictly followed to conform to this standard.

This document also uses terms defined in OGC API — EDR Part 1: Core.

5

# REQUIREMENTS

---

## REQUIREMENTS CLASS 1

|                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## REQUIREMENT 10

**IDENTIFIER** /req/nwp\_radar/radius-endpoint

**INCLUDED IN** Requirements class 1: [http://www.opengis.net/spec/ogcapi-edr-3/1.0/req/nwp\\_radar](http://www.opengis.net/spec/ogcapi-edr-3/1.0/req/nwp_radar)

**STATEMENT** The service SHALL provide a /collections/nwp\_radar\_precipitation/radius endpoint.

|   |                                                                                                                                                                                                                                                                                               |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A | The service SHALL return CoverageJSON FeatureCollection and GRIB2, GeoTIFF, HDF5, NetCDF4, PNG file formats.                                                                                                                                                                                  |
| B | The service SHALL return a default file format of GeoTIFF.                                                                                                                                                                                                                                    |
| C | Each feature SHALL include precipitation_amount property.                                                                                                                                                                                                                                     |
| D | Each feature SHALL include datetime property in the format YYYY-MM-DDTHH:MM:SSZ e.g. 2026-04-12T21:20:50.52Z.                                                                                                                                                                                 |
| E | The radius data queries SHALL return CoverageJSON that complies with the OGC Coverage JSON standard — <a href="https://docs.ogc.org/cs/21-069r2/21-069r2.html#_df6ce66a-7369-49cb-b59f-47a8c5d424ca">https://docs.ogc.org/cs/21-069r2/21-069r2.html#_df6ce66a-7369-49cb-b59f-47a8c5d424ca</a> |
| F | The radius data queries SHALL return GeoTIFF which complies with the DGIWG 108 GeoTIFF for GeoRef Imagery Standard.                                                                                                                                                                           |
| G | The radius data queries SHALL return GRIB2 which complies with the WMO Manual On Codes — <a href="https://library.wmo.int/records/item/35625-manual-on-codes-volume-i-2-international-codes">https://library.wmo.int/records/item/35625-manual-on-codes-volume-i-2-international-codes</a> .  |
| H | The radius data queries SHALL return HDF5 which complies with the CF-NetCDF v1.13 conventions — <a href="https://cfconventions.org/Data/cf-conventions/cf-conventions-1.13/cf-conventions.html">https://cfconventions.org/Data/cf-conventions/cf-conventions-1.13/cf-conventions.html</a> .   |

## REQUIREMENT 10

|   |                                                                                                                                                                                                                                                                                                |
|---|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| I | The radius data queries SHALL return NetCDF4 which complies with the CF-NetCDF v1.13 conventions – <a href="https://cfconventions.org/Data/cf-conventions/cf-conventions-1.13/cf-conventions.html">https://cfconventions.org/Data/cf-conventions/cf-conventions-1.13/cf-conventions.html</a> . |
|---|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## REQUIREMENT 11

**IDENTIFIER** /req/nwp\_radar/profile-nwp-parameters

**INCLUDED IN** Requirements class 1: [http://www.opengis.net/spec/ogcapi-edr-3/1.0/req/nwp\\_radar](http://www.opengis.net/spec/ogcapi-edr-3/1.0/req/nwp_radar)

**STATEMENT** The following parameters SHALL be supported: datetime, precipitation\_amount.

**A** The parameter datetime SHALL be in Gregorian calendar Zulu datetime (UTC) in 24 hour clock with a precision to the second.

**B** The parameter datetime SHALL be the time format specified in RFC 3339.

**C** The parameter precipitation\_amount SHALL return values in kg m-2 units.

## REQUIREMENT 12

**IDENTIFIER** /req/nwp\_radar/http-methods

**INCLUDED IN** Requirements class 1: [http://www.opengis.net/spec/ogcapi-edr-3/1.0/req/nwp\\_radar](http://www.opengis.net/spec/ogcapi-edr-3/1.0/req/nwp_radar)

**STATEMENT** The service SHALL be configured to return data for both GET and POST HTTP Method Requests.

**A** The service SHALL support both GET and POST HTTP Methods for queries.

#### ABSTRACT TEST A.1

|              |                                                                                                                    |
|--------------|--------------------------------------------------------------------------------------------------------------------|
| IDENTIFIER   | /conf/nwp_radar/spatial-extents-crs                                                                                |
| REQUIREMENT  | Requirement 1: /req/nwp_radar/spatial-extents-crs                                                                  |
| TEST PURPOSE | Validate that spatial extents crs is correctly implemented.                                                        |
| TEST METHOD  |                                                                                                                    |
| STEP         | Send GET request to /collections/nwp_radar_precipitation<br><br>Verify that the bbox geometry is defined in WGS84. |

## ABSTRACT TEST A.1

Verify that the bounding box coordinates are presented as geographical latitude, then longitude.

Verify that the bounding box coordinates are returned in decimal degrees.

## ABSTRACT TEST A.2

**IDENTIFIER** /conf/nwp\_radar/profile-bbox-coordinates

**REQUIREMENT** Requirement 2: /req/nwp\_radar/profile-bbox-coordinates

**TEST PURPOSE** Validate that profile bbox coordinates is correctly implemented.

### TEST METHOD

Send GET request to /collections/nwp\_radar\_precipitation

**STEP** Verify that the box boundary is for the extent [-180, -90, 180, 90].

Verify that the bounding box coordinate reference system is EPSG:4326 (WGS84).

## ABSTRACT TEST A.3

**IDENTIFIER** /conf/nwp\_radar/profile-trs-values

**REQUIREMENT** Requirement 3: /req/nwp\_radar/profile-trs-values

**TEST PURPOSE** Validate that profile trs values is correctly implemented.

### TEST METHOD

Send GET request to /collections/nwp\_radar\_precipitation

**STEP** Verify that the trs is in Gregorian calendar Zulu datetime (UTC) in 24 hour clock with a precision to the second.

Verify that the trs is in the time format specified in RFC 3339 e.g. 2026-04-12T21:20:50.52Z.

## ABSTRACT TEST A.4

|              |                                                                                                                                                                                                                                                                                |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IDENTIFIER   | /conf/nwp_radar/profile-vrs-values                                                                                                                                                                                                                                             |
| REQUIREMENT  | Requirement 4: /req/nwp_radar/profile-vrs-values                                                                                                                                                                                                                               |
| TEST PURPOSE | Validate that profile vrs values is correctly implemented.                                                                                                                                                                                                                     |
| TEST METHOD  |                                                                                                                                                                                                                                                                                |
| STEP         | <p>Send GET request to /collections/nwp_radar_precipitation</p> <p>Verify that the vrs is defined in height metres.</p> <p>Verify that the vrs is defined as WKT2 EPSG:3855.</p> <p>Verify that the vrs has the vertical datum EGM2008 geoid as the zero-height reference.</p> |

## ABSTRACT TEST A.5

|              |                                                                                                                                                                                                               |
|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IDENTIFIER   | /conf/nwp_radar/profile-keywords                                                                                                                                                                              |
| REQUIREMENT  | Requirement 5: /req/nwp_radar/profile-keywords                                                                                                                                                                |
| TEST PURPOSE | Validate that profile keywords is correctly implemented.                                                                                                                                                      |
| TEST METHOD  |                                                                                                                                                                                                               |
| STEP         | <p>Send GET request to /collections/nwp_radar_precipitation</p> <p>Verify that the collection keywords list includes the following keywords – “cube”, “radius”, “items”, “precipitation_amount”, “radar”.</p> |

## ABSTRACT TEST A.6

|              |                                                       |
|--------------|-------------------------------------------------------|
| IDENTIFIER   | /conf/nwp_radar/profile-links                         |
| REQUIREMENT  | Requirement 6: /req/nwp_radar/profile-links           |
| TEST PURPOSE | Validate that profile links is correctly implemented. |
| TEST METHOD  |                                                       |

## ABSTRACT TEST A.6

|      |                                                                                                                                  |
|------|----------------------------------------------------------------------------------------------------------------------------------|
| STEP | Send GET request to /collections/nwp_radar_precipitation                                                                         |
|      | Verify that the links object consists of href, rel, title and type elements and that they are filled in with appropriate values. |
|      | Send GET request to the root URL /                                                                                               |
|      | Verify that the links object consists of href, rel, title and type elements and that they are filled in with appropriate values. |

## ABSTRACT TEST A.7

|              |                                                                                |
|--------------|--------------------------------------------------------------------------------|
| IDENTIFIER   | /conf/nwp_radar/profile-query-types                                            |
| REQUIREMENT  | Requirement 7: /req/nwp_radar/profile-query-types                              |
| TEST PURPOSE | Validate that profile query types is correctly implemented.                    |
| TEST METHOD  |                                                                                |
| STEP         | Send GET request to /collections/nwp_radar_precipitation                       |
|              | Verify that the following data queries are listed — “cube”, “items”, “radius”. |

## ABSTRACT TEST A.8

|              |                                                                 |
|--------------|-----------------------------------------------------------------|
| IDENTIFIER   | /conf/nwp_radar/items-endpoint                                  |
| REQUIREMENT  | Requirement 8: /req/nwp_radar/items-endpoint                    |
| TEST PURPOSE | Validate that items endpoint is correctly implemented.          |
| TEST METHOD  |                                                                 |
| STEP         | Send GET request to /collections/nwp_radar_precipitation/items. |
|              | Verify response Content-Type is application/json.               |
|              | Verify each feature contains precipitation_amount property.     |
|              | Verify each feature contains datetime property.                 |

## ABSTRACT TEST A.8

Verify that the datetime is in the format YYYY-MM-DDTHH:MM:SSZ e.g. 2026-04-12T21:20:50.52Z

Verify that the default file format is GeoTIFF.

Verify that the endpoint supports CoverageJSON FeatureCollection and GRIB2, GeoTIFF, HDF5, NetCDF4, PNG file formats.

Send GET request to /collections/nwp\_radar\_precipitation/items for a CoverageJSON file type.

Verify that the CoverageJSON file format returned complies with the OGC Coverage JSON standard — [https://docs.ogc.org/cs/21-069r2/21-069r2.html#\\_df6ce66a-7369-49cb-b59f-47a8c5d424ca](https://docs.ogc.org/cs/21-069r2/21-069r2.html#_df6ce66a-7369-49cb-b59f-47a8c5d424ca)

Send GET request to /collections/nwp\_radar\_precipitation/items for a GeoTIFF file type.

Verify that the GeoTIFF file format returned complies with the DGIWG 108 GeoTIFF for GeoRef Imagery Standard.

Send GET request to /collections/nwp\_radar\_precipitation/items for a GRIB file type.

Verify that the GRIB2 file format returned complies with the WMO Manual On Codes — <https://library.wmo.int/records/item/35625-manual-on-codes-volume-i-2-international-codes>.

Send GET request to /collections/nwp\_radar\_precipitation/items for a HDF5 file type.

Verify that the HDF5 file format returned complies with the CF-NetCDF v1.13 conventions — <https://cfconventions.org/Data/cf-conventions/cf-conventions-1.13/cf-conventions.html>.

Send GET request to /collections/nwp\_radar\_precipitation/items for a NetCDF4 file type.

Verify that the NetCDF4 file format returned complies with the CF-NetCDF v1.13 conventions — <https://cfconventions.org/Data/cf-conventions/cf-conventions-1.13/cf-conventions.html>.

## ABSTRACT TEST A.9

|            |                               |
|------------|-------------------------------|
| IDENTIFIER | /conf/nwp_radar/cube-endpoint |
|------------|-------------------------------|

|             |                                             |
|-------------|---------------------------------------------|
| REQUIREMENT | Requirement 9: /req/nwp_radar/cube-endpoint |
|-------------|---------------------------------------------|

## ABSTRACT TEST A.9

### TEST PURPOSE

Validate that cube endpoint is correctly implemented.

### TEST METHOD

### STEP

Send GET request to /collections/nwp\_radar\_precipitation/cube with a valid coordinate in CRS EPSG:4326.

Verify response Content-Type is application/json.

Verify each feature contains precipitation\_amount property.

Verify each feature contains datetime property.

Verify each feature has height in metres based upon the EGM2008 gravity model.

Verify that the datetime is in the format YYYY-MM-DDTHH:MM:SSZ e.g. 2026-04-12T21:20:50.52Z

Verify that the default file format is GeoTIFF.

Verify that the endpoint supports CoverageJSON FeatureCollection and GRIB2, Geo TIFF, HDF5, NetCDF4, PNG file formats.

Send GET request to /collections/nwp\_radar\_precipitation/cube for a CoverageJSON file type.

Verify that the CoverageJSON file format returned complies with the OGC Coverage JSON standard — [https://docs.ogc.org/cs/21-069r2/21-069r2.html#\\_df6ce66a-7369-49cb-b59f-47a8c5d424ca](https://docs.ogc.org/cs/21-069r2/21-069r2.html#_df6ce66a-7369-49cb-b59f-47a8c5d424ca)

Send GET request to /collections/nwp\_radar\_precipitation/cube for a GeoTIFF file type.

Verify that the GeoTIFF file format returned complies with the DGIWG 108 GeoTIFF for GeoRef Imagery Standard.

Send GET request to /collections/nwp\_radar\_precipitation/cube for a GRIB file type.

Verify that the GRIB2 file format returned complies with the WMO Manual On Codes — <https://library.wmo.int/records/item/35625-manual-on-codes-volume-i-2-international-codes>.

Send GET request to /collections/nwp\_radar\_precipitation/cube for a HDF5 file type.

Verify that the HDF5 file format returned complies with the CF-NetCDF v1.13 conventions — <https://cfconventions.org/Data/cf-conventions/cf-conventions-1.13/cf-conventions.html>.

## ABSTRACT TEST A.9

Send GET request to /collections/nwp\_radar\_precipitation/cube for a NetCDF4 file type.

Verify that the NetCDF4 file format returned complies with the CF-NetCDF v1.13 conventions — <https://cfconventions.org/Data/cf-conventions/cf-conventions-1.13/cf-conventions.html>.

## ABSTRACT TEST A.10

**IDENTIFIER** /conf/nwp\_radar/radius-endpoint

**REQUIREMENT** Requirement 10: /req/nwp\_radar/radius-endpoint

**TEST PURPOSE** Validate that radius endpoint is correctly implemented.

### TEST METHOD

Send GET request to /collections/nwp\_radar\_precipitation/radius with a valid coordinate in EPSG:4326 and a radius of 1km.

Verify response Content-Type is application/json.

Verify each feature contains precipitation\_amount property.

Verify each feature contains datetime property.

Verify each feature has height in metres based upon the EGM2008 gravity model.

Verify that the datetime is in the format YYYY-MM-DDTHH:MM:SSZ e.g. 2026-04-12T21:20:50.52Z

### STEP

Verify that the default file format is GeoTIFF.

Verify that the endpoint supports CoverageJSON FeatureCollection and GRIB2, GeoTIFF, HDF5, NetCDF4, PNG file formats.

Send GET request to /collections/nwp\_radar\_precipitation/radius for a CoverageJSON file type.

Verify that the CoverageJSON file format returned complies with the OGC Coverage JSON standard — [https://docs.ogc.org/cs/21-069r2/21-069r2.html#\\_df6ce66a-7369-49cb-b59f-47a8c5d424ca](https://docs.ogc.org/cs/21-069r2/21-069r2.html#_df6ce66a-7369-49cb-b59f-47a8c5d424ca)

Send GET request to /collections/nwp\_radar\_precipitation/radius for a GeoTIFF file type.

## ABSTRACT TEST A.10

Verify that the GeoTIFF file format returned complies with the DGIWG 108 GeoTIFF for GeoRef Imagery Standard.

Send GET request to /collections/nwp\_radar\_precipitation/radius for a GRIB file type.

Verify that the GRIB2 file format returned complies with the WMO Manual On Codes – <https://library.wmo.int/records/item/35625-manual-on-codes-volume-i-2-international-codes>.

Send GET request to /collections/nwp\_radar\_precipitation/radius for a HDF5 file type.

Verify that the HDF5 file format returned complies with the CF-NetCDF v1.13 conventions – <https://cfconventions.org/Data/cf-conventions/cf-conventions-1.13/cf-conventions.html>.

Send GET request to /collections/nwp\_radar\_precipitation/radius for a NetCDF4 file type.

Verify that the NetCDF4 file format returned complies with the CF-NetCDF v1.13 conventions – <https://cfconventions.org/Data/cf-conventions/cf-conventions-1.13/cf-conventions.html>.

## ABSTRACT TEST A.11

|            |                                        |
|------------|----------------------------------------|
| IDENTIFIER | /conf/nwp_radar/profile-nwp-parameters |
|------------|----------------------------------------|

|             |                                                       |
